

1. EpsonFp2 Active X / OCX Control

[Changes from former version 5.2.0]

Too many to list. Please refer to ReleaseNotesEpsonFpSuite_3.2.0.txt file present in the zip.

With the verbose installer, this component is always installed. It manages and operates one or many Epson fiscal printers through the use of an Active X / OCX control that provides methods which can return values and/or set properties.

The EpsonFp2Config utility is included and can be used to set the communication port and activate traces and logs as well as check connectivity.

EpsonFp2 is typically used with Visual Studio. A demo VB6 project is included.

2. EpsonFpMate

[Changes from former version 6.2.0.0]

Too many to list. Please refer to ReleaseNotesEpsonFpSuite_3.2.0.txt file present in the zip.

The EpsonFpSuite verbose installer prompts to confirm or bypass the installation of this component. It manages and operates up to 10 Epson fiscal printers through the use of simple TXT or XML files. EpsonFpMate can also create output files that contain all sorts of useful information such as that relating to commercial document print-outs or from the issuing of commands.

The EpsonFpMate package consists of two parts:

- EpsonFpMateConfig utility used to set the environment.
- EpsonFpMate daemon used to manage fiscal printers.

EpsonFpMate has been developed under Windows .NET framework technology.

3. EpsonFpWizard

[Changes from former version 2.2.0]

Too many to list. Please refer to ReleaseNotesEpsonFpSuite_3.2.0.txt file present in the zip.

The EpsonFpSuite verbose installer prompts to confirm or bypass the installation of this component. It is a configuration and management utility used to program Epson FP printers. It also provides PLU, logo and MPD (EJ) management functions.

In all cases the fiscal communication protocol exchanges are handled and controlled by EpsonFp2 supporting serial RS-232, USB or LAN/Wi-Fi/RNDIS TCP/IP connectivity.
